

# VEHICLE SECURITY RENEWALS

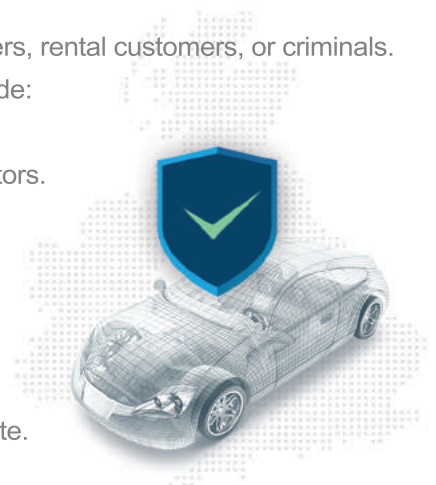

***“Restore any vehicle’s original security settings.”***

VSR repairs completely remove the risk of a vehicle being accessed or stolen using compromised data, by restoring a vehicle's original digital and mechanical security features to their 'as new' settings.

VSR services revoke access (data) held by previous parties in control such as; previous owners, rental customers, or criminals. Occasions in which vehicle owners should consider having a VSR procedure performed include:

- Following the use of a vehicle by rental customers, temporary personnel or outside contractors.
- Following the loss or theft of their keys or, the theft or break-in of their vehicle.
- Prior to the sale of, or upon purchase of, a used vehicle.
- Following a request by their Insurer to do so.

After each procedure has been performed, confirmation of the vehicle’s secure status and the number of relevant Active Keys in possession of the keeper is provided by formal Certificate.

#### Total Protection

Remove the risk of a used vehicle being accessed or stolen using compromised data.<sup>1</sup>

#### No Parts Required

Most Security Renewals can be performed by repair only and therefore do not require replacement keys or other parts.

#### Approved Programming

Security clearance provided by OEMs means a future proof solutions for the latest vehicle models and EVs.

#### Certified Works

Backed by the Vehicle Security Renewal Framework, proof that a vehicle's secure status and the number of Active Keys a vehicle holds on completion is provided by formal certificate.

Certificates can then be presented to insurers, prospective vehicle buyers or any other relevant parties as proof of a vehicle's security status or, to give greater clarification and certainty over the security history of a vehicle.

The performance of **Vehicle Security Renewals** is available exclusively to fleet and the automotive trade.
